Beyond Reality is a very entertaining RPG/RPGMaker game. It might be one of the best I've played in that kind of games. Many side quests. No excessive grinding necessary to meet primary and secondary goals. The storyline does the job. Your party is eclectic enough and its formation can be changed. That makes the game less repetitive and less boring than many games of that kind. Last but not least! The dev was of great support when stuck with some achievements (just take a look at discussion topics to notice that). It's nice and somewhat rare to see devs caring for players and taking time to answer them on other matters than technical bug related subjects.. Beyond Reality is a decent sized great adventure game. The story is quite compelling and the music is pretty sweet. I really enjoyed the play through as it definitely reminded me of pokemon, which imo is also great :) Overall it is a good game to get lost in for a couple of hours and definitely worth the money.. The game becomes pretty interesting after about 10 minutes of playing.. Good linear game if you like that . A few side quests , easy to play , easy to figure out .. Great RPG, easy to get achievements, and a great story.. This game crashes when going into fullscreen. It also instantly crashes when minimizing. Kind of unacceptable to me. Controller support is bad. On an Xbox One controller, many buttons do nothing, such as the command for menu (Start). Instead, the Start button is an up arrow. No rebinding options. Games for which you need to waste time trying to work properly should not be purchased. (note: the 4 ish hours played was me idling for cards.)
